Online Electric Vehicle (EV) Safety Induction for Port Staff Course

Electric Vehicles (EVs) are no longer a trend; they're becoming standard in port operations. This course turns complex EV technology into clear, practical safety knowledge.

You'll learn to work confidently with electric equipment, recognise potential battery risks, and support your port's transition to cleaner operations.

Designed for frontline port staff, it uses simple, accessible language to ensure everyone understands their role in maintaining safety in an increasingly electric maritime industry.

By enrolling your port staff on our EV safety induction training, you will help:

1. Build a safety culture around EVs in your port.
2. Prepare your teams for future growth as EV cargo volumes increase and electrification becomes the industry standard.
3. Reduce liability and demonstrate diligence in meeting health and safety obligations as EVs become standard port equipment and cargo.
4. Protect port assets, infrastructure and reputation from potential EV fire damage through early hazard recognition.
