Online Behavioural Threat Detection Using CCTV for Port Security Course

Price: £75 GBP Per Person

Duration: 3 Hours

Award: ABS Accredited

Course Type: Fully Online

Equipping Port Control Rooms & CCTV Operators to Detect Hostile Indicators & Emerging Security Risks at Ports & Port Facilities

CCTV operators in ports are often the first line of defence against unauthorised access, hostile reconnaissance, smuggling behaviours, and security breaches.

This online course develops the skills to detect, interpret, and act upon behavioural indicators of threat, duress, and deception through CCTV.

Designed for port control rooms and maritime surveillance teams, it helps operators shift from passive monitoring to proactive detection, improving the clarity of intelligence passed to gate teams, patrols, and supervisors, and strengthening decision-making, escalation, and evidence-led reporting.

Why Choose This Course

1. This programme focuses on behavioural threat detection and nonverbal analysis, giving operators tools beyond “observe and report”.
2. Built for the unique pressures of port environments including gates, fencelines, quaysides, cargo areas, and terminal movement routes.
3. Learn to spot behavioural anomalies early, producing actionable intelligence before incidents escalate.
4. Strengthens existing surveillance and security systems by improving the quality of cueing, escalation, and reporting.
5. Self-paced learning designed for shift teams, delivered through a variety of video modules and scenario-based instruction.
